

# A Sunny Smile?

Individuals graphed below were selected for the prominence of their smiles as shown in their photographs. The square-line maps "strong" smiles that are very evident; "big" smiles. The circle-line maps "weak" smiles, those with only a slight smile. The distribution suggests an opposing pattern that is most noticeable in Capricorn.

Above is a graph of 99 Sun signs taken from the Gaquelin trait data books. These are individuals described in biographical references as "smiling" or "always smiling." Capricorn is again below the mean and Scorpio above it.
